1. Research the procedure and specifications for inspecting the clutch drum, piston, check balls, springs, retainers, seals, and friction and pressure plates for each clutch.
 - a. In the table below, list the name of each clutch this transmission/transaxle is equipped with and the number of steel plates and friction plates it contains.

| Name of Clutch | Number of Steel Plates | Number of Friction Plates |
|----------------|------------------------|---------------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

- b. List, or print off and attach to this sheet, any specifications related to the clutch drum, piston, check balls, springs, retainers, seals, and friction and pressure plates:
 - c. Research the procedure and specifications for inspecting the bands.
 - i. List each band and the gear(s) each band is applied in:

ii. List any specifications for each band:

2. Following the specified procedure, disassemble and inspect the components for each clutch assembly. List your observations for each clutch:

3. Following the specified procedure, inspect each band for wear or damage. List your observations:

4. Determine any necessary action(s):

5. Have your supervisor/instructor verify satisfactory completion of this procedure, any observations found, and any necessary action(s) recommended.
