

**► TASK** Disassemble, clean, and reassemble transmission/transaxle components.

**MAST**  
3C6

**CDX Tasksheet Number: C910**

Time off	_____
Time on	_____
Total time	_____

1. **Research the procedure to disassemble, clean, and reassemble the transmission/transaxle in the appropriate service information.**
  - a. **List any special tools required for this task:**
  
  
  
  
  
  
  
  - b. **List, or print off and attach to this sheet, the procedure to disassemble and reassemble the transmission/transaxle:**
  
2. **Following the specified procedure, disassemble the transmission/transaxle, ensuring that you note their location and orientation. Make notes or take pictures as appropriate. Lay them out in a logical manner to facilitate reassembly.**

**NOTE** Round objects such as gears, shafts, ball bearings, roller bearings, and bushings can roll off of the work table if not secured, causing personal injury. This could also lead to damage or loss of the components. Always lay round objects on their side when possible, or store them in a work tray to prevent rolling.

3. **Clean the components according to the specified procedure. Make sure you relocate them in the same logical sequence as before.**
  
4. **Perform a preliminary visual inspection of the components. This is an initial inspection designed to identify major issues with the transmission/transaxle. Further inspection of the subunits and parts will occur as you perform the next several tasks.**  
**List your observations:**

5. **Have your supervisor/instructor verify the initial disassembly and your observations.**

a. **Supervisor's/instructor's initials:** \_\_\_\_\_ **Date:** \_\_\_\_\_
